

Advanced anti-vibration system for ceiling suspension. Consists of a steel spring and rubber to achieve maximum isolation performance on low + medium + high frequencies. Now comes with a new security system to guarantee better resistance and higher security.

Advantages The steel spring provides an excellent degree of vibration insulation in the low/medium frequencies. - The rubber provides an important vibration isolation of the medium/high frequencies. - The combination of these 2 components make the best anti-vibration system for ceiling suspension.
